

Sdrive Max Warning

Powerd by The Atari

Powered by a power supply

Please note the position of the switch on the Sdrive Max.

The picture on the left has the switch to the left and is powered by the Atari.

The picture on the right has the switch to the right and is powered by an external power supply. Power supply with a plug or by a USB cable.

If you are using an **external power** supply please make sure that the switch is to the **right** as you can damage your sdrive or your Atari if the switch is to the left.

External power = Switch to the **Right**.

Internal power = Switch to the **Left**.

The Sdrive will come with the switch to the left, unless otherwise stated

Last but not least Enjoy. Thanks for your custom S. Gould owner of 8bit-Tronics.
